PROFESSIONAL SUMMARY

Computer Science and Engineering graduate and Full Stack Developer with hands-on experience building responsive, scalable web applications using React, Node.js, and MongoDB. Adept at developing user-friendly front-end interfaces, integrating secure REST APIs, and utilizing containerization tools like Docker. Possesses a strong foundation in modern web development, SQL/NoSQL databases, asynchronous message brokers, and machine learning technologies.

SKILL

Frontend: JavaScript (ES6+), TypeScript, React, Tailwind CSS, HTML/CSS, Bootstrap, Responsive/Mobile-first Design

Backend & Tools: Node.js, REST APIs, JWT Authentication, MongoDB/SQL, Git, Django, Python, Java, PHP

AI & Machine Learning: Natural Language Processing (NLP), Computer Vision (PyTorch), scikit-learn.

Languages: Bengali (Native), English (C2 Proficient), Japanese (A2 Elementary)

PROJECTS

CivilHub – Civil Engineering Ecosystem Platform

- Built the frontend with React and TypeScript, using type-safe components and Tailwind CSS for a responsive, mobile-first UI connecting civil engineers, contractors, and clients
- Integrated the React frontend with a Node.js/MongoDB backend via REST APIs, implementing JWT-based authentication, district-based location filtering, and BDT currency support
- Built a BUET/IEB engineer verification flow end-to-end across frontend and backend

EEE Hardware Management System

- Developed a full-stack web application in React and Node.js for departmental hardware inventory and tool allocation
- Built a real-time tracking and booking UI with an admin dashboard, connected to a MongoDB-backed REST API

Probin Nibash – Elderly Home and Care Platform

- Designed and built responsive, intuitive user interfaces for service booking and communication between elderly individuals and caregivers

Email Spam Detection System

- Built a machine learning model to classify spam emails using NLP techniques, with feature engineering and model optimization in Python and scikit-learn

EXPERIENCE

Research Intern, United International University (UIU)

March 2026 – Present

- Designed a hybrid event-based and RAW image processing pipeline for motion deblurring, improving image quality in dynamic scenes
- Conducted research on multi-modal internal threat detection, resulting in an academic paper, in collaboration with faculty

Teaching Assistant, United International University (UIU)

December 2025 – February 2026

- Supported 100+ students across Algorithms, Data Structures, and Software Engineering courses through tutorials and lab guidance
- Developed course materials and assessment tools to improve student engagement

EDUCATION

United International University – BSc in Computer Science and Engineering

2021 – Present

All coursework complete; Final Year Design Project (2 credits) in progress | GPA: 3.38/4.00 | Major: Data Science and Web Development

Dhaka City College – Higher Secondary Certificate (HSC)

2018 – 2020

GPA: 5.00/5.00

Ideal School and College – Secondary School Certificate (SSC)

2018

GPA: 5.00/5.00
